Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Developing simulation programs shows many similarities with classical system software development tasks. In simulation one is often concerned with allocating and deallocating resources. Two forms of deadlock — the 'deadly embrace' and 'apr  -vous' — can be troublesome to simulators unless they know how to avoid them in the first place. Critical races and time dependent functions are other characteristics shared between simulation and systems programming. If simulation is v ...

2 [Session 35: power-constrained design for multimedia: SMERT: energy-efficient design of a multimedia messaging system for mobile devices](#)

Lin Zhong, Bin Wei, Michael J. Sinclair

July 2006 **Proceedings of the 43rd annual conference on Design automation DAC '06**

Publisher: ACM Press

Full text available: pdf(897.47 KB)

Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Customized multimedia content delivery has become one of the most desirable applications to mobile device users. However its intense usage of wireless and user interfaces poses a great challenge to device usability and battery lifetime. In this paper, we describe our design and implementation of an energy-efficient multimedia messaging system to address this challenge. We construct a hierarchical system for users to access multimedia content, leveraging widely available short message service (SM ...

**Keywords:** energy-efficient design, mobile services, multimedia messaging3 [Peer data exchange](#)

Ariel Fuxman, Phokion G. Kolaitis, Ren  e J. Miller, Wang-Chiew Tan

December 2006 **ACM Transactions on Database Systems (TODS)**, Volume 31 Issue 4

Publisher: ACM Press

Full text available: pdf(371.58 KB)

Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

In this article, we introduce and study a framework, called *peer data exchange*, for

sharing and exchanging data between peers. This framework is a special case of a full-fledged peer data management system and a generalization of data exchange between a source schema and a target schema. The motivation behind peer data exchange is to model authority relationships between peers, where a source peer may contribute data to a target peer, specified using source-to-target constraints, and a ta ...

**Keywords:** Data exchange, certain answers, conjunctive queries, data integration, metadata model management, schema mapping
